

KC & KC-2 9000 Series Trim for Narrow Stile Aluminum Doors

Solutions for Deadbolts and Deadlatches

The KC & KC-2 9000 Series trim is designed for a variety of deadbolts and deadlatches for narrow stile aluminum doors. Lever, knob or turnpiece models are available for deadlatches, while the knob models operate the deadbolt. Installation is simple: the existing cylinder is removed and the trim interface is inserted into the lock.

Access is achieved using code and/or iButton. Trim accepts a standard mortise cylinder for mechanical key access when required. When lever trim is not used, door conditions may require the use of a different pull. Pull handles are sold separately see ordering information below.
