● Technical Data

- 1) Video resolution: 640 x 480 @ 30fps (AVI format)
- 2) Internal memory:4GB
- 3) USB 2.0 interface
- 4) Charging time: 3-4 hours
- 5) Operating systems: Windows ME/ 2000/ XP/ VISTA or above (Windows 98 will require drivers to be installed).

● Operation

◆ Switch on

Remove the cover on the bottom the bottle then push the power switch to the left side

◆ Recording video and audio by remote control

Press the Remote Control for 2 seconds and the green light will turn on, when the green light begins to blink the device has begun recording. Press the remote control once more and the green light will stop blinking and stay lit, the video file is then saved and the camera returns to standby mode.

◆ Recording video and audio manually

Press the Record/save button for 2 seconds, the green light will turn on and then begin to blink indicating it has begun recording. Press the Record/save button once, the green light will stop blinking and remain steady, the video file is then saved and the camera returns to standby mode.

◆ Switch off

Push power on/off button to the right side, all lights on the unit will turn off and the device will stop working.

Attention: If you turn off the device in this manner while in the middle of recording, it will not be able to save the current footage.

◆ Charging

Connect the device either to a charger or your PC via the USB cable while the unit is off, the green light on the charger remains on while being charged. The green light turns off when it is fully charged.

Attention: To get the most out of the included high-capacity Polymer Li-Ion battery, please be sure to fully charge and let the battery fully drain before recharge, for the first 5 times that you use it.

◆ Playback video

Connect the camera to your computer via the USB cable and you will be able to play back video on the computer. You can either run the video directly off of the device, or move the files to your PC to watch them and save them.

◆ **Setting time**

- 1) Connect the camera with computer
- 2) Create a new "PHTIME.txt" file in the root directory
- 3) Enter the time into the file using the following format: 2009-12-12 12:12:12
- 4) When you start up the camera the next time, the time should be "stamped" onto the video according to your file.

● **Attention**

- 1) If the device does not receive any commands for 1 minute, it will turn itself off automatically.
- 2) If the batteries in the unit are about to die, it will save the current footage before turning itself off.
- 3) When taking video continually, the system will automatically generate a new video file after each operation.
- 4) When recording in a bright environment, keep the camera vertical and stable.
